RUGZOMBIE VALUE PROP

RugZombie is intent on restoring value to victims of hacks, rugs, and scams in some truly unique ways:

- Exclusive NFTs based on the rugged tokens in wallet
- Unique Liquidity Pairings to rescue value out of the BNB pairs of rugged tokens
- Utility Ecosystem for NFTs and ZMBE holders.

Our cohort of artists are incredible and range from 2D stills to 3D renderings, animations and more. This make our NFTs of the highest quality; not only are they aesthetically pleasing, but will carry utility in our ecosystem.

Furthermore, our unique manner of generating the NFTs means that our NFTs will continue to be rare, as they are only minted as a result of time-based staking requirements.

SPAWNING POOLS

Spawning Pools are the RugZombie version of "syrup pools". By staking ZMBE in our platform, users will be able to generate a yield in YOUR TOKEN. The pools are limited release (30-45 days). Users also generate an NFT that is custom made for your token.

RugZombie is able to separate ourselves from other staking platforms because of the stake-for-NFT abilities we provide our users. These NFTs can eventually be folded into our gaming ecosystem, or present more partnership opportunities down the road for your team.

They additionally can be utilized by your dev team in whatever manner you decide.

For Spawning Pools, our core team requires a small application, and will review your project accordingly.

Every Spawning Pool token requires at least their techrate full audit completed, a deliverable NFT (we can help facilitate this arrangement with artists that meet our quality standards) and an initial conversation with our business developer before listing.

Benefits for your Project:

- Marketing and Advertising
- Exclusive NFT partnership that drives users to your platform
- Increases wallet holders by allowing ZMBE holders participation in your platform

Please note the RugZombie team takes each of these applications seriously and not every project is going to meet our quality standards. Factors we consider are a) use-case b) strong code c) TVL, market cap, etc. d) strength of community and e) professionalism of the dev team

ZTOKEN SERIES

Our Z -Token Series is a unique NFT generating option for limited partnerships and exclusive or limited release NFT ideas.

It began with autoshark.finance; because of the exploit on their platform of \$SHARK, the dev team decided to issue a valueless token that would only be utilized to generate an NFT on our platform rather than drive users to keep and hold \$SHARK in their wallets.

This zToken was airdropped to their legacy holders and their users were then permitted to utilize the zToken on our platform in order to earn their NFTs. Since all of our GRAVES that we dig for rugged tokens require the rugged token to be deposited for verification, this is not a tenable solution for active projects.

Issuing a zToken allows the project team to leverage RugZombie's innovative ideas while also giving full control to your dev team to consider how best to issue this token. These tokens have no liquidity and are only used to verify the users ability to earn the NFT in our system.

The marketing buzz that can be created around this idea is truly remarkable, and the opportunities for it are endless.

This is a great option for testing a partnership with RugZombie as it requires almost zero financial obligation from your project. We create the NFT and list the GRAVE similarly to our other GRAVES, with a custom label that your project is BURIED ALIVE, and not a rugged token.

For our Z Token Series the only consideration is marketing and advertising for your community.

Benefits for your Project:

- Marketing and Advertising
- Exclusive NFTs, whose rarity is controlled by your team
- Low Cost Option

WHY NFT

Our focus on NFTs is purposeful. Value is a matter of perspective. NFTs have the amazing ability to play several roles all at once and the possibilities for your project NFT are really endless.

- Rare/Exclusive Art - For the appreciator of art, our NFT artists are top-notch. Our design team will ensure that your NFT is incredible and truly stands out. Art is perhaps the "low hanging fruit" use case of NFTs.
- Collectibles - Not only are the RugZombie NFTs beautiful to behold, they are collectible. This is driven by the fact that each of our NFTs mostly represents a unique part of defi history, making these NFTs truly a cultural phenomenon.
- Store of Value - While not typically spoken about, NFTs have the ability to retain value against other assets due to their non-fungible qualities. It is possible to retain financial value for users as they trade, buy and sell NFTs on our upcoming secondary market.
- Utility - Beginning with our gaming ecosystem and merchandising, our NFTs will be utilized in some unique and innovative ways that will only make their value increase as our users see their function in these 2 environments.
